

A Reality Competition Series

# WHITEBOARD CHALLENGE

AN AWARD WINNING GAME SHOW WITH SOFTWARE ENGINEERS

## LOGLINE

Real software engineers perform the infamous "Whiteboard Challenge" interview in front of a live audience, testing their talent and tenacity for solving brain-bending coding challenges. Viewers will vote for their favorite, while learning to code and compete from home.

# SYNOPSIS | GAME PLAY

Whiteboard Challenge is a tech industry interviewing practice where naturally introverted software engineers are asked to step out of their comfort zone by solving a coding challenge, hand written on a white board, in front of a panel of experts. This is the standard, yet unnerving process across the tech industry.

This original series holds the unique entertainment value of being both compelling to watch and a program for learning. While most series use general knowledge as a basis for game/challenge, our series presents and illustrates a skill that requires incredible talent, but is also becoming a skill requirement on a basic level even among elementary school students.

# PILOT

The “Whiteboard Challenge,” created by Michael Kureth and co-produced by Michael Garcia and Daniel Munoz, is the first and only show of its kind featuring an intelligent and competitive take on the software engineering interview process in the form of a game show.

In the pilot episode of “Whiteboard Challenge,” each contestant portrays a prevalent societal topic with women in tech, age discrimination, and homelessness. The judges on the show represent Latino and African American engineering leadership in tech.

The algorithm solved on the pilot episode is a basic form of the formula used in the creation of randomized levels for games and determining the quickest route for driving directions. We see a visualization of the code being run in the form of a self driving car race.

After one contestant is eliminated, the final two compete in a microsecond timed playback of their code.

Following in the tradition of an actual interview where personal preference weighs in the hiring decision, the winning contestant at the premiere was influenced by the number of votes received.

At the free premiere and tech event on September 21, 2019, attendees were encouraged to volunteer and donate to People Assisting The Homeless. A theme for each episode on the show is to benefit and raise awareness for a cause in tech.

# CHARACTERS

## Judges

The primary judge on each episode will be the celebrity talent to gain viewers interest. The secondary two will provide balance and insight as engineering managers and executives in the tech industry.

## Contestants

The contestants on the show will be software engineers representing different and relatable qualities of the viewers. These include: people of color in tech, women in tech, older engineers, etc. These roles give empathy and broaden the audience.

## Host

The host of the show is Michael Kureth who has 20+ years of both technology and entertainment experience. The target audience will expect and respect this role portrayed by someone with this experience.

## Audience

The audience of the show votes on the contestant to win which adds additional points to performance. The audience is also encourage to learn the code challenge and compete from home.

# SUMMARY

Each episode will have a main theme which is represented by the code challenge. This will teach the audience how common applications and services are built as well as intrigue viewers into the field. Each contestant is asked the code challenge individually as the judges discuss related topics with the host. The question is the same for each contestant since it will be teaching the viewer.

Once each contestant has completed the challenge, feedback is provided by an assigned judge using question similar to those at an interview. When all three contestants are complete, the judges eliminate one contestant.

The remaining two contestants then transcribe their answers to functional code. This is then run through a visual simulation for the audience to see. The winner of the show is based on audience votes and code efficiency. The judges then provide feedback on how they would answer the question and give reasons to this answer.

## CODECHALLENGE

WHITEBOARDCHALLENGE.COM

YOU ARE BUILDING A GAME WITH A 3 LANE ROAD AND EACH LANE CONTAINS AN OBSTACLE. GIVEN AN ARRAY OF OBSTACLES, CREATE AN ALGORITHM TO MOVE THE CAR TO THE END OF THE ROAD IN THE LEAST POSSIBLE CHANGES OF DIRECTION.

SAMPLE DATA  
VAR CAR = 1;  
VAR OBSTACLES =  
[1, 0, 2, 1, 1, 2, 0, 2];

# SERIES CONCEPTS

## EPISODE 01: COMPETITION

*Inspired by Dorothy Vaughan, Mary Jackson, and Katherine Gobel Johnson for calculating the launch of astronaut John Glenn into orbit.*

### PREMISE

Contestants will write an algorithm to simulate the successful navigation of a spacecraft from Earth to Mars given a set of parameters.

### VISUALS

Viewers will see a game where a spacecraft travels from Earth to Mars as well as other planets in our solar system.

**CONTESTANTS:** African American Women

## EPISODE 02: COMPETITION

*Inspired by Grace Hopper who invented the first computer compiler.*

### PREMISE

Contestants will write an algorithm to transpile sets of code into another computer language.

### VISUALS

Viewers will see the input values and responses compared to the time and results of the transpiled.

**CONTESTANTS:** Women

## EPISODE 03: COMPETITION

*Inspired by John Forbes Nash Jr. who made fundamental contributions to game theory, differential geometry, and the study of partial differential equations.*

### PREMISE

Contestants will write an algorithm for machine learning that will use game theory to predict optimal behaviors.

### VISUALS

Viewers will see a simulation of human interactions based on artificial intelligence.

**CONTESTANTS:** Hidden Disabilities

## EPISODE 04: COMPETITION

*Inspired by Enigma, the device used by the German military command to encode strategic messages before and during World War II.*

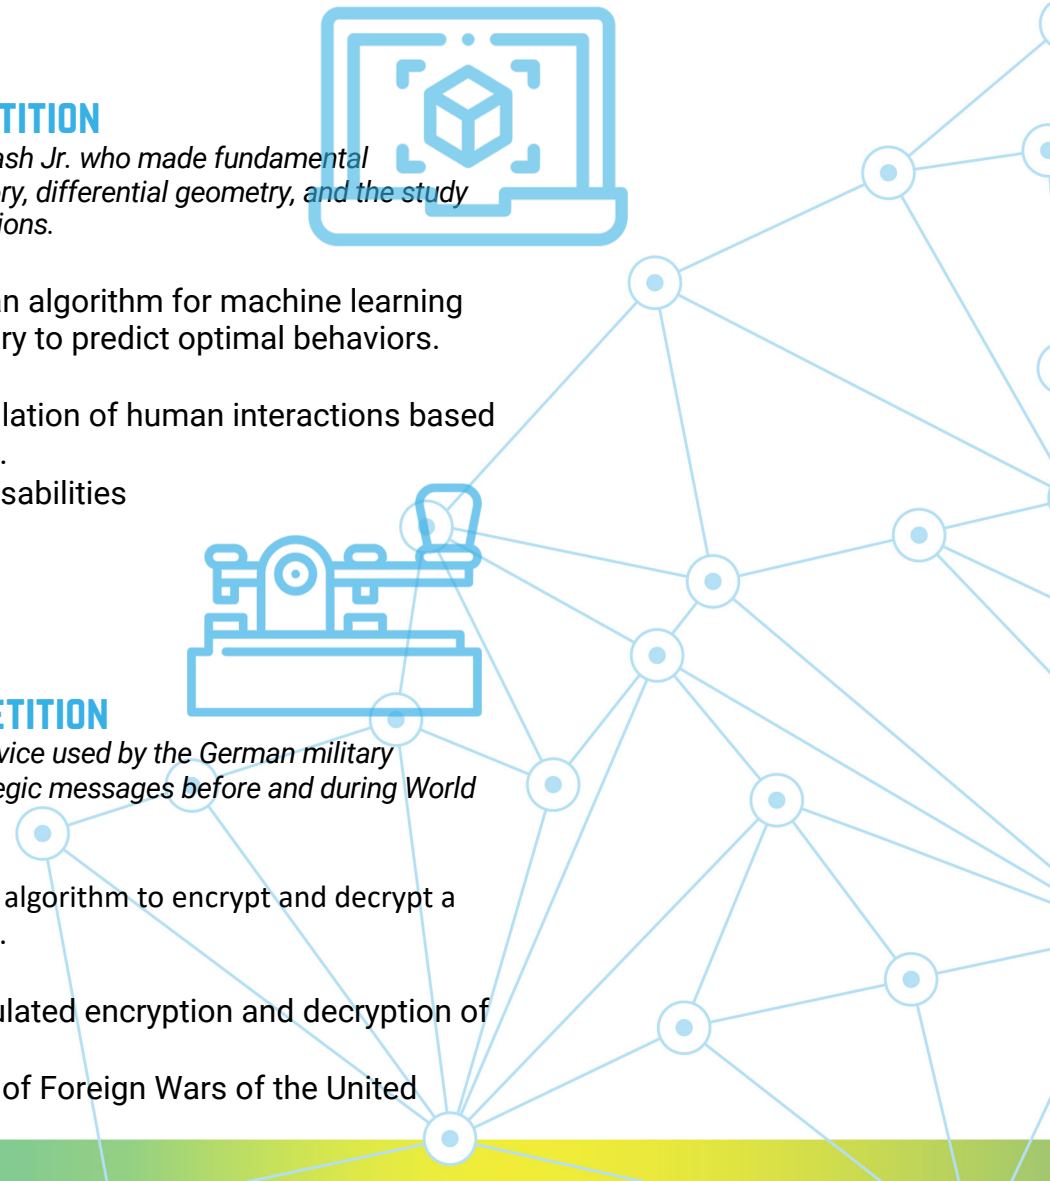

### PREMISE

Contestants will write an algorithm to encrypt and decrypt a complex set of messages.

### VISUALS

Viewers will see a simulated encryption and decryption of content.

**CONTESTANTS:** Veterans of Foreign Wars of the United States

# SERIES CONCEPTS

## EPISODE 05: COMPETITION

*Inspired by Aaron Swartz, the child computer prodigy who advocated for information to be free.*

### PREMISE

Contestants will write an algorithm to catalog large sets of data with indexing and search functionality

### VISUALS

Viewers will see large data as it is being indexed and searched

**CONTESTANTS:** Child Prodigies

## EPISODE 06: COMPETITION

*Inspired by Meredith Charles "Flash" Gourdine, an athlete, engineer, and physicist who won a silver medal at the 1952 Summer Olympics.*

### PREMISE

Contestants will write an algorithm to navigate a player through an obstacle course given a parameter of data.

### VISUALS

Viewers will see a race game with sprint, jumps, and curves

**CONTESTANTS:** Athletes

## EPISODE 07: COMPETITION

*Inspired by Roy Clay Sr., known as the "Godfather of Silicon Valley" who in the 1950s wrote software that demonstrated how particles of radiation would spread through the atmosphere after an atomic explosion.*

### PREMISE

Contestants will write the core algorithm to create and simulate particle generation.

### VISUALS

Viewers will see how particles of radiation would spread through the atmosphere after an atomic explosion.

**CONTESTANTS:** Engineers with tech startups

## EPISODE 08: COMPETITION

*Inspired by Julian Assange who is known for creating WikiLeaks and hacking into many government, educational, and corporate networks.*

### PREMISE

Contestants will write an algorithm to investigate and retrieve data from an unknown source before organizing it for optimization and archival.

### VISUALS

Viewers will see unorganized data source being restructured and sorted.

**CONTESTANTS:** Reformed Hackers

# SERIES CONCEPTS

## EPISODE 09: COMPETITION

*Inspired by the many homeless software engineers in Los Angeles and San Francisco.*

### PREMISE

Contestants will write an algorithm of a self driving vehicle as the core mechanic behind a ways based map application.

### VISUALS

Viewers will see a game with a car driving itself through many obstacles on the quickest route.

**CONTESTANTS:** Homeless or formerly homeless

## EPISODE 10: SEMI-FINALS

*Large scale system design.*

### PREMISE

Contestants will architect and build a large scale image processing service.

### VISUALS

Viewers will see as buildings representing the servers are attacked with millions of users in traffic and security testing hacks

**CONTESTANTS:** Winning contestants from episodes 1, 2, and 3

## EPISODE 11: SEMI-FINALS

*Large scale system design*

### PREMISE

Contestants will architect and build a large scale cataloging service.

### VISUALS

Viewers will see as buildings representing the servers are attacked with millions of users in traffic and security testing hacks

**CONTESTANTS:** Winning contestants from episodes 4, 5, and 6

## EPISODE 12: SEMI-FINALS

*Large scale system design.*

### PREMISE

Contestants will architect and build a large scale chat service

### VISUALS

Viewers will see as buildings representing the servers are attacked with millions of users in traffic and security testing hacks

**CONTESTANTS:** Winning contestants from episodes 7, 8, and 9

## EPISODE 13: FINALS

*Behavioral questions.*

### PREMISE

Contestants will answer behavioral based questions.

### VISUALS

Viewers will see a graphic representation of the contestants' polygraph.

**CONTESTANTS:** Winning contestants from episodes 10, 11, and 12

## CAST BIOS

### Mike Kureth

#### Creator/ Host

<https://www.imdb.com/name/nm1585811/>

Mike Kureth is the creator and host of Whiteboard Challenge. He began programming at age 7 and has more than 20 professional years experience in software engineering along with 15 in film.

### Tim Shaw

#### Celebrity Judge

<https://www.imdb.com/name/nm2948302/>

Tim Shaw is a British radio host, TV presenter and engineer. He is currently hosting a selection of factual engineering and science TV series on the National Geographic TV channel in both the US and International territories.

### Joey Fatone

#### Celebrity Judge

<https://www.imdb.com/name/nm0004909/>

Joey Fatone is an American singer, dancer, actor, and television personality. He is best known as a member of the boyband NSYNC, in which he sang baritone. In 2007, he came in second place on the ABC reality show Dancing with the Stars.

### Tyanta Snow

#### Celebrity Judge

<https://www.imdb.com/name/nm11430555/>

Tyanta Snow is an actor, known for 100 Humans: Life's Questions. Answered. (2020), America Says (2018) and Fix My Choir (2014).

### Rachel Riley

#### Celebrity Judge

<https://www.imdb.com/name/nm2948302/>

Rachel Riley is an actress, known for The IT Crowd (2006), Countdown: Championship of Champions (1984) and 8 Out of 10 Cats Does Countdown (2012).

### Sashani Nichole

#### Celebrity Judge

<https://www.imdb.com/name/nm4450922/>

Sashani Nichole is a television and film actress from the island of Jamaica. She is known for starring in "A Christmas Winter Song," as Mia, opposite Grammy Award Winner, Ashanti and veteran actor, Stan Shaw.
